Remote monitoring apparatus of gas heat pump type air conditioners, has CPU which transmits abnormal operation information based on air conditioner operating condition detection demand from monitoring adapter

YAMAHA MOTOR CO LTD 1999.04.22 1999JP-115406

Q75 W05 X27 (2000.11.02) F24F 11/02, F25B 27/00, 49/02

Novelty: Monitoring adaptor (5) is connected to CPU (19) and telephone line (4) connected to facsimile (3). When there is a demand to detect operating condition of air conditioner from monitoring adapter, the CPU detects the operating condition and transmits information corresponding to abnormal operation to monitoring adapter. The information is output to facsimile receiver in predetermined format.

Use: For gas heat pump type air conditioners.

Advantage: As operating condition of air conditioner is routinely checked, the management cost at the time of trouble generation is reduced.

Description of Drawing(s): The figure shows the block diagram of control system of remote monitoring apparatus of gas heat pump (GHP) type air conditioner.
